PROFESSIONAL SUMMARY

Results-driven **Full Stack Lead and AI Engineer** with **4+ years** of experience building scalable, cloud-native enterprise systems in **.NET Core, C#, Angular, and Microservices**. Specialising in production-grade **AI engineering**: RAG pipelines, agentic multi-step workflows, local LLMs, and enterprise guardrail systems (hallucination detection, schema validation, fallback logic). Proven delivery in **Healthcare, Pharmacy, HRMS, and Finance** domains. Actively targeting **senior remote engineering roles** globally.

TECHNICAL SKILLS

Languages: C#, Python, JavaScript, SQL

Backend: .NET Core, ASP.NET Core/MVC, REST APIs, Microservices, Entity Framework Core

Frontend: React, Angular

AI / LLM Stack: LangChain, LangGraph, RAG Pipelines, Agentic Workflows, Local LLMs, Observability (logging pipelines, token tracing), Guardrails

Cloud and DevOps: Azure DevOps CI/CD, Azure Functions, Azure Blob Storage, Azure App Services, AWS EC2, AWS S3, AWS Lambda, AWS RDS, YAML Pipelines

Databases: MS SQL Server, PostgreSQL, AWS RDS

Tools: Git, Visual Studio, VS Code, Postman, SSMS

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Pratham Softwares, Jaipur

Nov 2025 – Present

- Architecting a high-throughput pharmacy data sync platform processing **10 million+ patient records daily** with near real-time consistency across distributed nodes using **.NET Core** and **Microservices**
- Designing and operating **Azure CI/CD pipelines** integrating **Azure Functions** and **Blob Storage** for automated, event-driven data ingestion, reducing manual operational effort by **35%**
- Implementing microservices-based sync validation and reconciliation workflows achieving **99.9%+ uptime** in a production healthcare environment
- Collaborating in **Agile** sprints with QA and product teams to deliver reliable, zero-downtime releases for critical pharmacy operations

Team Lead – Senior Software Developer | Cynosure Technologies (Timelabs), Jaipur

Sep 2024 – Nov 2025

- Led a team of **5 full stack developers**, owning architecture decisions, code reviews, and mentorship for **.NET Core** and **Angular**-based HRMS platform
- Defined and executed migration from legacy stack to **.NET Core** and **Angular**, cutting API latency by **40%** and scaling throughput to **25,000+ daily records**
- Delivered real-time HRMS dashboards via **Microservices** and **REST APIs**, improving user productivity by **25%**
- Automated deployments via **Azure DevOps** YAML pipelines, reducing release overhead by **20%** and enabling consistent weekly shipping cadence

Associate Developer | Cynosure Technologies (Timelabs), Jaipur

Sep 2023 – Sep 2024

- Delivered E-Doc, Employee Self-Service, and Onboarding modules using **.NET Core, Angular, and REST APIs** with end-to-end QA integration
- Optimised **SQL Server** queries and **Entity Framework Core** for high-volume HRMS data, improving query performance by **30%**
- Integrated Finance and HRMS third-party APIs while maintaining clean architecture and SOLID design principles

- Built financial applications handling **200,000+ daily transactions** using **.NET Core**, **C#**, and **Angular**
- Integrated secure payment gateways via **RESTful APIs** with full error-handling and PCI-aligned reliability standards
- Optimised SQL schemas and query plans, boosting data pipeline performance and accuracy by **25%**

KEY PROJECTS

Enterprise RAG System with Production Guardrails – *Python, LangChain, llama.cpp, Chroma, Llama 3, Mistral*

- Built a production-grade **RAG pipeline** over **100K+ documents** using **LangChain**, **Chroma** vector database, and locally-hosted **Llama 3 / Mistral** via **llama.cpp**, achieving **zero hallucination** in retrieval-grounded responses
- Engineered a **three-layer guardrail system**: hallucination detection via cross-source fact-checking, **output schema validation** (structured JSON outputs), and **fallback and retry logic** for graceful degradation
- Fully **offline / air-gapped deployment** with local LLMs – no external API dependency, ideal for privacy-sensitive enterprise environments in regulated industries
- Implemented **end-to-end observability** with LangSmith tracing, structured logging pipelines, and token-level monitoring for latency, cost, and retrieval quality tracking in production

Agentic Multi-Step AI Pipeline – *Python, LangGraph, Pinecone, Tool Use*

- Designed a **LangGraph**-powered autonomous agent with conditional routing, tool use (web search, code execution), and **human-in-the-loop checkpointing** for complex multi-step task orchestration
- Integrated **Pinecone** as vector memory store for cross-session context persistence across agent planning cycles

Pharmacy Sync Platform – *Healthcare, .NET Core, Azure Functions, Blob Storage*

- Event-driven sync system handling **10 lakh+ patient records daily** via **Azure Functions**, **Blob Storage**, and Microservices with **99.9%+ uptime** and zero-downtime deployments

HRMS Real-Time Dashboard Platform – *.NET Core, Angular, Azure DevOps, Microservices*

- Microservices-based HRMS platform handling **25,000+ daily records** with **Angular** frontend and **Azure DevOps** CI/CD – **40% latency reduction** post-migration

Hospital Management System – *.NET Core MVC, Angular, SQL Server, JWT, REST APIs*

- Modular HMS for **50,000+ patient records** with JWT authentication, REST API layer, and Azure-integrated automation reducing administrative overhead by **30%**

EDUCATION

Master of Computer Applications (MCA), University of Kota (RTU)	2021 – 2024 (72%)
Bachelor of Computer Applications (BCA), University of Rajasthan	2018 – 2021 (77%)

AWARDS & RECOGNITION

- **AI Hackathon Winner 2026** – Built an agentic AI solution with local LLM guardrails, recognised for innovation in enterprise intelligent automation at Pratham Softwares
- **Tech Dynamo 2025** – Recognised for innovative HRMS microservices architecture design at Cynosure Technologies
- **Impact Employee of the Year 2024** – Awarded for delivering high-value enterprise HRMS solutions ahead of schedule
